Maximum Marks	4 Marks

Empathy Map Canvas

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to help teams better understand their users. Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Empathy Map: AI Learning Assistant

User: A student working through a learning challenge

Think & Feel

- "Why can't I understand this? Everyone else seems to get it."
- "I don't want to bother my teacher again with another question."
- Worried about falling behind in the subject
- Wants to feel capable and in control of their own learning

Hear

- Classmates casually mentioning they've already finished the topic
- Instructors saying "just re-read the chapter" without deeper explanation
- Online forums full of conflicting advice
- Notifications reminding them of upcoming deadlines

See

- A wall of dense text in the textbook with no simplified explanation
- Generic chatbots that respond the same way regardless of how they're feeling
- Other students appearing confident and unbothered
- A blank progress tracker with no sense of how they're actually doing

Say & Do

- Types "I don't understand this" into a search bar out of frustration
- Re-reads the same paragraph multiple times without asking for help
- Closes the laptop and disengages when bored or stuck
- Occasionally asks a quick question in a forum, then doesn't return to check the answer

Pain

- No one notices when they're quietly struggling or losing motivation
- Existing tools treat every learner identically, regardless of emotional state
- Getting help feels slow, generic, or embarrassing to ask for

- Confusion and frustration compound the longer they go unaddressed

Gain

- Immediate, judgment-free support the moment they describe their struggle
 - Responses that feel personalized to their subject and their specific feeling
 - A sense of being understood, not just given information
 - Confidence to keep going instead of giving up on the topic
-

Summary

This empathy map highlights that the core unmet need isn't just academic content — it's **emotional acknowledgment paired with relevant guidance**. This directly shaped the AI Learning Assistant's approach: detecting the student's actual emotional state (Bored, Confident, Confused, Curious, Frustrated) from their own words, then responding with both empathy and a concrete, field-specific next step.
