Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS		THINKS
"I don't get this at all." "This is so boring, why do I need to know this?" "I've tried this three times and keep getting it wrong."	PERSONA NAME <i>Independent Online Learner</i>	"Am I just not smart enough for this?" "Everyone else probably understood this already." "Is it worth asking for help, or will that make me look behind?"
DOES		FEELS
- Re-reads the same paragraph multiple times without progress. - Closes the tab/app when stuck instead of asking for help. - Skips ahead without truly understanding prior material.		- Frustrated when stuck on the same problem repeatedly. - Bored when material feels repetitive or too basic. - Anxious about falling behind compared to peers.
